Hi Ralph,

In reviewing the log data for the new wells drilled in Auburn, we are missing a few pieces of data that we need to analyze the borehole flows. Paul D'Annabale or Rob Homung will likely have this information:

1. Casing stick-up (log reference point) above LS
2. Ambient (static) water level (from casing) prior to pumped heat-pulse flow metering
3. Pumped water level (from casing) during pumped heat-pulse flow metering
4. Drawdown during pumping
5. Pumping rate

Also, do you have the survey coordinates for the four new wells?

Thank you.

--Dave
